January 1996

Anchorage Amateur Radio Club Newsletter  
Editor - Harvey Rookus, NL7DK

Vol. 25, No. 1

HAPPY NEW  
YEAR TO  
ALL

PROGRAM-

"WINTER GAMES VIDEO"

## NOTICE

The meeting will be held in "The Carr-Gottstein Building."

This is the second building on the left as you enter the APU Campus.

It is our Old Meeting Place!!

Same time 7:00 PM

JANUARY 5TH 1995

## *From The Minutes*

By: NL7NN, Susan Woods

The 1st of December 1995 General Meeting of the Anchorage Amateur Radio Club was held on the Second floor of the Atwood Center on the Alaska Pacific University campus. The Christmas Party began at 6:00 pm. Live music was provided by Pianist Suzanne Wetterall. Members and their guests visited until 6:30 pm at which time Mel Saunders, AL7PB, incoming 3 year board member, welcomed everyone to the festivities. All members were encouraged to check in with John Bury, KL7QZ, for door prize tickets. Then Mel invited all present to eat. At 7:00 pm that famous man in red - Santa Claus arrived, bringing gifts to about fifteen children!

At 7:30 pm, a group of ladies led all present in the singing of Christmas Carols. Lilly Marvin, NL7DL, who was the leader of the group, sang three Christmas solos. After the caroling was completed, Mel Saunders, AL7PB brought out all of the door prizes. Before the radio, red, green and white crocheted cookie bags, Santas and mystery boxes were given away. Susan Woods, NL7NN, representing the PARKA (Polar Amateur Radio Klub of Alaska) group presented the following awards: PARKA plaques went to,

Scott McCormick, WL7CJM for Novice/Rookie of the year 1995.

Gerianne Thorsness, WL7RY for Community Activity Ham of the year 1995.

Roger Hansen, KL7HFQ, received the Lifetime Achievement Award - 1995

The last door prize to be given away was an Icom dual band handi-talkie. When Roger Sheley, NL7RY heard his name called, he stood up, thanked the AARC profusely, then headed out the door.

Merry Christmas and Happy New Year to all of you from the Anchorage Amateur Radio Club.

These minutes were written with the help of Gerianne Thorsness, WL7RY, and respectfully submitted by, Susan J. Woods, NL7NN Sec. AARC.

NOTE: The Board Minutes for December will be in the February Newsletter!

### Notice

The Newsletter Editor is looking for someone to help put out the April Newsletter and then put out the May Newsletter by themselves. The Editor plans to be out of the state for the entire month of April 1996. Anyone who would be interested in giving a helping hand please call Harvey - NL7DK at 333-4693. Thanks, Editor.

PS Anyone who has any new or better ideas, stories or thoughts regarding the Newsletter will be welcomed also. NL7DK.

### SILENT KEYS

**Mary Olendorff** - KL7BJD became a Silent Key on November 20, 1995. Mary came to Alaska in 1951, living at Big Lake for 10 years and in Anchorage for 35 years. She was a member of the Anchorage Amateur Radio Club and also a member of QCWA (Quarter Century Wireless Association.) For quite a few years Mary had lived at the Pioneer Home in Anchorage from where she operated a Ham station. Even when Mary's health kept her from doing much she was at many Ham events to lend her presence and any help she could offer. We will miss her!

**Edwin 'Dick' Hann** - AL7LE, formerly WB6DPY, became a Silent Key on November 16, 1995. Dick came to Alaska in 1981, living in Eagle River for a short time, before moving to Kasilof. Dick was a past president of the Golden Empire Amateur Radio Club of Chico, California and also past president of the Moose Horn Amateur Radio Club of Kenai.

### *The Anchorage Amateur*

the monthly newsletter of the Anchorage Amateur Radio Club. Permission is granted for reproducing articles appearing in the Anchorage Amateur that do not indicate a copyright separate from the Anchorage Amateur Radio Club. Letters to the Editor and articles for publication should be submitted to Harvey Rookus, NL7DK, 3310 Checkmate Drive, Anchorage 99508. Telephone number (907) 333-4693. Articles and Notices for the paper should be typewritten or on IBM compatible formatted computer disks (5.25 or 3.5 inch). Graphic illustrations for articles are also welcome.

Articles and Notices for the paper should be typewritten or on IBM compatible formatted computer disks (5.25 or 3.5 inch). Graphic illustrations for articles are also welcome.

**1996 ARCTIC WINTER GAMES UPDATE****WINTER GAMES VIDEO TO BE SHOWN AT JANUARY MEETING**

As of now we have a total of three people signed up to help out with amateur radio communications at the Winter Games. This means that our present plans limited to operating a special events station at Chugiak High School during the week of March 3-10. We will try to keep it in operation from about 8:00 AM to 8:00 PM daily. Hopefully a HF station can be set up to do some operating from the site. At the very least we will be set up to accept radiogram messages from Games participants and relay them via 2 meter FM to area amateur radio operators for further relay on amateur radio networks to their destinations.

If additional people volunteer to help, other operations are possible such as:

- Packet communications for results announcements
- Communications for transportation buses
- Amateur TV coverage of events
- Communications for outdoor events
- Communications networking for the entire Winter Games organization

Copies of sign up sheets and volunteer registration forms will be available at the January meeting.

**TUBES FOR RUSSIANS**

The other night I was talking to UA0IAS and was told that the radio club in Magadan has recently acquired some old US made amateur equipment which they are trying to get fixed up. Naturally, the tubes that the equipment uses are not readily available in Russia; so I told the operator, RW0IWR, that we would try to help get him some of the tubes they need. The following lists are tubes that are needed to get equipment working and ones that they need for spares. Please check your junk boxes to see if you have any of them. Also pass this list along, via the internet or radio contacts, to anyone else who you know that may be able to supply some. Provisions have been made for the tubes to be picked up in Anchorage and hand carried to the Russian radio club early next year. Bring any tubes you can supply to the AARC meetings or contact me and I will arrange to pick them up (in the Anchorage area).

## FROM: LIL MARVIN NL7DL

This is an example of what happens to nonused equipment which the AARC obtains through donation or as part of a silent key's estate. Look slightly to the left of the head of the young girl in the front and you will see part of a Tempo 1 HF radio. This radio is currently part of the equipment of the Children's Radio Club RZ0IWR of Palatka, Magadan, Russia. It was donated to the club by the AARC about a year ago, and the young members of the club have made good use of it since then. The AARC has also, with the help of Roger Hansen KL7HFQ and others, sent RZ0IWR some old tube-type radios, and many parts necessary for making repairs and modifications, and will continue to do so as needed in the future.

What does a young person in Magadan, Russia do when it's cold outside, there is nowhere to go and nothing to do except get into trouble? If Vladimir Kolodkin UA0IAS, an ex-pilot, has his way, these young people join RZ0IWR. Vlad has dedicated his time and expertise to these young people and their radio club. Vlad shows up at our back door from time to time (but we never know when until we actually see the whites of his eyes!) and often walks away with equipment donated from the AARC. With Vlad's help these young people take the equipment and parts (almost all of which is very difficult to obtain in Russia) donated to them and do many of the repairs and modifications themselves, including modifying the equipment to work on the 220-volt electricity in use in Russia. They also make good use of the equipment on the air. They have worked many Alaska stations, and some of you may be among them. (I know because I am their Alaska QSL card manager!)

The young people pictured from front to back are: Svetlana, aged 12; Alex, aged 12; and Alexis, aged 14.

## Electromagnetic Fields - FINIS

through the Faraday effect. For the charge-to-mass ratios involved, the cyclotron orbit radii would be many orders of magnitude too large, roughly 2 meters in the case of a calcium ion moving in the Earth's magnetic field at thermal velocities characteristic of body temperature. Collisions in the liquid environment would destroy any such orbits before they were formed.

Early reports of such low-frequency resonances and related "window effects" were based on marginal statistical accuracy, and the results varied from one paper to another. More important, many attempts by independent observers to reproduce such effects have failed.

**T**here is no believable evidence that low-level electric and magnetic low-frequency fields in the common urban environment from power distribution lines and home appliances represent any significant threat to human health. From a physical basis, the fields induced in the body from such sources must be small compared to unavoidable fields that are present all the time from natural processes. Fear of adverse health effects from power lines will go down in history as another case of nonsense, like cold fusion and "the fifth force."

Yet according to D. Allan Bromley, science advisor to President Bush, the current scare might have cost the American public as much as \$23 billion during the five-year period starting in 1989, largely in moving and burying high-voltage lines. Others have put lower figures on the cost. Estimates generally omit the cost of schools that have been

shut down and the loss of property values resulting from the scare.

More ominously, the meter is still running. Half a dozen states have adopted poorly thought out legal limits on field strengths near power lines that are based on the status quo, which is bound to be counterproductive. In Florida, the first state to enact such a law, the maximum allowable magnetic field at the edge of a right of way actually increases with the line voltage. That may be a practical necessity for existing lines, but the health implication, that a higher magnetic field is acceptable as long as the electric field also increases, is ridiculous.

The threat to put warning labels on electric can openers and TV sets will only trivialize legitimate health warnings. The woman from Long Island who took her son out of school after she measured a 20 mG field near his seat in the classroom did more damage to the child by interrupting his education than any believable effect of an ELF field. What people do in these situations is limited by available resources and an evaluation of other risks. Parents who pay to bury an electrical conduit from the street in order to avoid a 10 mG field in their child's bedroom have that much less to spend for truly preventive medicine or for education.

Electricity is the cleanest form of energy available. Its curtailment as a result of foolish legislation or lawsuits against power companies would be a major tragedy. What we really should be doing to reduce carcinogenic pollutants and to minimize long-term threats to our society is reducing our dependence on petroleum as a fuel for transportation.

## CONTAMINATION MAY EXPLAIN IN VITRO EFFECTS

In spite of physics, some investigators find that low-frequency electromagnetic fields have effects on cultured cells. Their results are inconsistent and difficult to replicate, but they are a principal reason why the possibility continues to arouse controversy.

Ferromagnetic particles are common in airborne dust and have been found to contaminate new laboratory glassware, plasticware, and even reagents. In a sham experiment, enough particles were recovered from rinsing a few new items of labware to potentially outnumber the cells that could have been cultured using those utensils.

If there were a large enough number of magnetite domains per cell, energy transfer could alter the function of mechanically gated ion channels, which normally operate at energy levels not much above thermal noise. It would take a magnetic field of at least 1400 milligauss at 60 Hz to open an ion channel with a magnetite particle of about 30 domains. Such a field is hundreds of times larger than those found near ground level from power lines.

Research with sensitive magnetometers requires special "clean lab" techniques to avoid contamination by dustborne ferromagnetic particles. Those who find low-frequency field effects on cells should try their experiments under similarly uncontaminated conditions.

Atsuko K. Kobayashi, Joseph L. Kirschvink, and Michael H. Nesson, *Nature* 374:123, March 9, 1995.

# Walking Stick Two Meter Beam

**Construction Notes:** The U shaped piece of 1/16th inch brass rod should be bend as close as possible to the PVC and wrapped with tape. A number of variations on material can be made including the use of aluminum rod instead of brass. A panel mount PL259 can be substituted for the BNC or you might wish to try just a pig tail. In any case adjust the feed point with a SWR meter before soldering if possible. All pieces of the antenna will fit inside the PVC. You will need a PVC cap at the top.

Design edited and prepared for publication by Jerry Bennion, WR7N

Thanks to the 'Microvolt' Utah Amateur Radio Club
